

# Volcano Features Puzzle

## Across

- 7. any type of solid volcanic debris
- 9. Magma and lava solidify to form \_\_\_ rock.
- 12. A \_\_\_ flow is made of hot rock debris
- 14. a cone-shaped mountain created by erupting magma
- 16. An \_\_\_ eruption is more violent and spreads ash far and wide.

## Down

- 1. a broad-based volcanic mountain formed solidified lava
- 2. A \_\_\_ cone volcano is the largest type.
- 3. molten rock flowing on the surface
- 4. An explosive eruption sends hot volcanic \_\_\_ high into the atmosphere.
- 5. a small volcanic mountain formed from explosive eruptions
- 6. A \_\_\_ eruption is one that features flowing lava.
- 8. when a volcano actively releases lava or ash
- 10. the top of a volcano when lava emerges
- 11. molten rock beneath the surface
- 13. A magma \_\_\_ is a large reservoir of magma below a volcano.
- 15. Volcanic \_\_\_ are boulder-sized rock debris tossed into the air during an eruption.
- 17. the pipe-like tubes along which magma flows in a volcano
